

AUV team of Maritime State University named after Admiral G.I. Nevelskoy is based in Vladivostok, Russia. The renegade students of Far Eastern Federal University, who participated in underwater robotics competitions for a few years and were looking for a new challenge, founded our team in 2015. They managed to build a strong team out of nothing due to support of the MSU authorities. The team ended up on the third place during RoboSub2015, which was amazing.

The roster of the team changes during the time. Former beginners now are mature leaders of the team trying to teach newcomers the essence of AUV building.

This year, we increased our reliability and added a few features to increase performance of our vehicle. Our team members – all MSU students and our mentors are MSU engineers with great experience. This year our goal is to win RoboSub2017 and we are looking forward it!
